New York City

Being Captivated by the Lamentation of Swans in Brooklyn, NY

Near Brooklyn's south tip, by the Ocean Avenue Bridge there are swans to be found floating solo or in pairs in **Sheepshead Bay**. They're there all year round—I discovered them in a dreamlike moment when walking across the bridge during a snowstorm. Heavy white flakes across the span gave way to plump white birds undeterred by the weather at the other end. Sometimes joined by ducks and geese, the birds can draw a small crowd in warmer months, but watching them glide along the surface is so very, very zen.
